

## Design Studio Syllabus

A two-semester (yearlong) sequence of courses:

- First (fall) semester (Design Studio I & III) consists of the following course numbers:  
RAIK 401H, RAIK 403H, CSCE 401H, CSCE 403H, BSAD 401H, BSAD 403H
- Second (spring) semester (Design Studio II & IV) consists of the following course numbers:  
RAIK 402H, RAIK 404H, CSCE 402H, CSCE 404H, BSAD 402H, BSAD 404H

**Class Meets:** TR 2:00 PM to 3:15, KAUF 122 (Kauffman Bldg. Great Hall)  
**Primary Instructor(s):** Rob Nickolaus  
**Hours of Availability:** 9:00 am to 5:00 pm M-F

### Faculty and Staff supporting Design Studio

| Role and Name                                                   | Location  | Office Phone | Email                                                                  |
|-----------------------------------------------------------------|-----------|--------------|------------------------------------------------------------------------|
| Director of Design Studio<br>Rob Nickolaus                      | KAUF 108A | 402-472-7465 | <a href="mailto:rnickolaus2@unl.edu">rnickolaus2@unl.edu</a>           |
| Architecture and Engineering Lead<br>Rachel Michela Mettenbrink | KAUF 108B | 402-472-6003 | <a href="mailto:rami@unl.edu">rami@unl.edu</a>                         |
| Design Studio Program Lead<br>KK Khoo                           | KAUF 108C | 402-472-5052 | <a href="mailto:kkhoo2@unl.edu">kkhoo2@unl.edu</a>                     |

| Academic Lead<br>Professor Seth Polsley                         | KAUF 145  | 402-472-6000 | <a href="mailto:spolsley3@unl.edu">spolsley3@unl.edu</a>               |
| Academic Lead<br>Alisha Bevins                                  | KAUF 135  | 402-472-6000 | <a href="mailto:alisha.bevins@unl.edu">alisha.bevins@unl.edu</a>       |

### Course Prerequisites

Good standing in the University Honors Program and admission to the Jeffrey S. Raikes School of Computer Science and Management or by invitation; RAIK 383H or equivalent.

### Course Sequencing

Students in the Raikes School traditionally take Design Studio for two years (four consecutive semesters). Associates, students outside of the Raikes School, also may take Design Studio by invitation for either one or two years.

Course progression for the different types of students/options is as follows:

- Raikes School Student with two years of Design Studio:
  - RAIK 401H → RAIK 402H → RAIK 403H → RAIK 404H
- Raikes School Student with one year of Design Studio and one year of Research Studio:
  - RAIK 401H → RAIK 402H → RAIK 405H → RAIK 406H
  - RAIK 405H → RAIK 406H → RAIK 401H → RAIK 402H
- Associate:
  - CSCE 401H → CSCE 402H
  - CSCE 403H → CSCE 404H (\*Optional for second year)
- Software Engineering Associate Options:

- CSCE 401H → CSCE 402H → CSCE 403H → CSCE 404H
- SOFT 401H → SOFT 402H → CSCE 403H → CSCE 404H
- CSCE 486 → CSCE 487 → CSCE 403H → CSCE 404H
- CSCE 401H → CSCE 402H → SOFT 403H → SOFT 404H

The course sequencing relates to ACE requirements. The RAIK 401H-402H (and CSCE 486-487) sequence offers both ACE 8 and ACE 10. The course progressions above preserve the student's ability to earn both of those graduation requirements with their initial year of Design Studio (or Senior Design).

### Course Description

Application of Raikes School core content in a team-oriented, experiential learning, project management setting. Complete projects in consultation with private and public sector clients.

### Learning Outcomes

At the end of this course, students will have gathered practical real-world product development experience with interdisciplinary team-based roles, environments, best practices, and processes by working with industry, government, and non-profit partners.

There are five main learning objectives where the students shall be able to:

- A. **Apply, demonstrate, and integrate learned professional skills including:**
  - Communications
  - Leadership
  - Ethics
  - Teamwork
  - Critical Thinking
  - Problem Solving
- B. **Discover and manage diverse expectations including:**
  - Client Relationships
  - Accountability
  - Conflict Resolution
  - Self-management
  - Self-motivation
  - Time Management
- C. **Apply, demonstrate, and integrate learned business skills including:**
  - Product Management (requirements analysis; marketing; story mapping)
  - Project Management and Planning
  - Risk Management
  - Visioning
  - Design Thinking
- D. **Apply, demonstrate, and integrate learned software engineering skills including:**
  - Testing/Quality Assurance
  - DevOps (working build processes; static code analysis; continuous integration)
  - Tech Proficiencies/Dependability Engineering
  - Architecture and Design
  - Release-driven Iterative Methodologies
- E. **Apply, demonstrate, and integrate learned group and team processes**
  - Developing a Team
  - Effective Team Processes
  - Managing Team Conflict
- F. **Learn beyond project/practice with:**

- Continual Learning
- Shared Learning
- Self-improvement
- Intellectual Curiosity (creativity; innovation)
- Acquiring or enhancing capacities to engage in informed, productive, and respectful discourse about complex ethical issues.

### **Course Required Materials**

No required materials or textbook.

### **Course Expectations and Rules Specific to Course**

Design Studio is the capstone learning experience of the Jeffrey S. Raikes School of Computer Science and Management. In Design Studio, student teams partner with sponsoring businesses, non-profit organizations, and government agencies to develop real-world, software-based solutions meeting their sponsor's needs. Design Studio gives students and sponsors the ability to interact while benefiting from the support of Raikes School faculty and facilities. Students have opportunities to demonstrate their abilities, knowledge, and capacities by completing consulting-based technology projects. Throughout these consulting-based projects, student teams will be required to determine and meet the expectations set forth by the project sponsors. Each project goes through all phases of the development process including initiation, execution, and closing.

Students are evaluated based on 1) individual and team improvement, 2) achievement of learning objectives, and 3) project success. Graded assignments used to assess achievement of this outcome include:

- Presentation to the sponsor at the completion of several checkpoints throughout the project to assess appropriate technical proficiency, information collection, synthesis, interpretation, presentation, and reflection.
- Iteration commitment/satisfaction forms to assess appropriate technical proficiency, synthesis, interpretation, and reflection.
- Sponsor documents to assess appropriate technical proficiency, information collection, synthesis, and interpretation.
- Project sponsor surveys and sign-off documents to assess broad knowledge, appropriate technical proficiency, information collection, synthesis, interpretation, presentation, and reflection.
- Project retrospective to assess information collection, synthesis, interpretation, presentation, and reflection.

### **Class Time**

Design Studio is made up of both hands-on product development and review sessions with faculty and staff. Class time is allocated each week for lectures and workshops designed to support each team. Guest lectures from the community on various topics are scheduled. In addition to lectures and workshops, class time occasionally will be used for teams to present work for review and feedback.

Class topics and content are organized by weeks and made available in Canvas modules throughout both semesters. The fall and spring schedules are provided in separate Design Studio Course Schedule documents:

- Presentation to the sponsor at the completion of several checkpoints throughout the project to assess appropriate technical proficiency, information collection, synthesis, interpretation, presentation, and reflection.
- Iteration commitment/satisfaction forms to assess appropriate technical proficiency, synthesis, interpretation, and reflection.

### Team Time

The focus of each student team is to achieve a successful project by delivering a working solution that delights the customer. Each team is responsible for organizing itself effectively to complete the project. Team time ideally will be scheduled in 3-4 hour blocks but may not be less than 2 hours without the permission of the Program Lead. For team time, the longer the block of time, the more productive the team. At least one block of team time must be scheduled on a weekday between 9 am and 5 pm (beginning at 4:30 pm does not fulfill this requirement). Due to the nature of product and software development, some weeks may require more work than others. Students are encouraged to use all available resources to work “smarter” and not necessarily just “harder.” Team time cannot be scheduled during Design Studio class time. Students are expected to spend at least 12 hours in team time each week and are encouraged to spend around 15 hours doing project work during any given week. Students who need to be remote need to set hours with the team and plan to participate interactively in team time through Zoom or other means as decided by the team. If conflicts arise with participation, the Program Lead should be consulted. Most of these hours should have the entire team present and no hours with only first-year or only second-year students. **Schedules must be approved by the project’s leadership team, sponsor, Program Lead, and Academic Lead. The team needs to send a finalized schedule (including weekly meetings) to all stakeholders and post and pin the schedule in their Slack project channel.**

Each team will be assigned a Program Lead. The Program Lead is the primary connection with the Design Studio organization. Program Leads should be invited to your weekly meeting with your sponsors. They are an important guide to product management and design studio processes.

In addition to the Program Lead, your team will be supervised by an Academic Lead (faculty instructor) who will meet with teams throughout the semester to review work and provide feedback and guide you through mastery of best practices of software development.

### Course Grading Policy

Grades will be based on both exhibited practices and delivered work product. Points are earned in the course as assigned by the Academic Lead in the following areas and scaled based on the percentages below.

- 45% - Release (see Project Releases below) evaluations from sponsors (graded 3 times per semester)
- 30% - Best practices and process (Goalbook is a workbook that guides you through best practices and is submitted for a final grade at the end of the semester)
- 10% Ethics / Presentations
  - (fall) Ethics (CSCE401H)
  - (fall) Ethics assignment (CSCE402H)
  - (fall) Core Values (RAIK401H/RAIK403H)
  - (fall/spring) Presentation / Showcase Materials
- 8% – course participation and engagement
- 7% – individual student assessment

Students are expected to participate and be engaged with the class content and activities. Students should be expected to be called on in class to answer questions on topics under discussion. Participation includes contributing to in-class discussions, review of posted videos, completing assigned activities, etc.

### Project Releases

A major component of Design Studio is the delivery of a software product that delights the customer. Students will be regularly evaluated by their sponsor or startup advisor and feedback provided to Design Studio leadership and the students. Students receive points based upon performance in their teams. At the end of each release, sponsor feedback is provided on four criteria: 1) vision, 2) planning, 3) execution, and 4) communication. Academic Leads evaluate the entire team and assign ratings based on their interactions and observations with the team during the

release development cycle. Any feedback received from the sponsor or startup advisor is used to mentor and teach students in any area needing additional instruction. Academic Leads will then assign the team points based on their own view of the project. Points from releases will be distributed in conjunction with a student peer-review process with each member of the team assigning some number of points to other team members. The total points earned by a student for each release will be assigned by the Academic Lead in consideration of the average of all points distributed to that student by the members of the team. **Points will be deducted from a student for non-completion of the peer review process within 3 days of notification.**

### Team Best Practices / Goalbook

One of the goals of Design Studio is to prepare students to be successful members of development project teams by exposing them to best practices that are associated with managing, building, and releasing high-quality products. Assessment will be based on the completion of Goalbook. Goalbook is an Excel workbook framework that tracks your product/project progression.

Students will set goals in the categories listed below which will be reviewed and evaluated with Academic Leads in their weekly interactions. For each team, the points associated with the goals in the above areas will be determined by the team in consultation with Academic Lead. The degree to which each of these items is performed will be evaluated by the Academic Lead assigned to your team. Be advised that you should ensure that you always conform to these practices. If you are unsure of how to put practices in place on your team, communicate with your Program Lead who is here to help guide you.

### Fall (Semester 1)

Product Management – Customer Discovery,  
Understanding Requirements, Ideation  
Risk Management  
Story Mapping – Vision, Release Planning  
Project Management – Initiation, Planning, Estimating,  
Logistics  
Teamwork – Leadership, Inclusion, Accountability  
DevOps – such as, but not limited to:

- Working Build
- Static Code Analysis
- Continuous Integration
- Continuous Deployment
- Releases – Process, Commitments
- Risk Management

Release Management  
Project Specific Best Practices

### Spring (Semester 2)

Communications – Presentations, Technical Writing  
Expectation Management – Improving Estimation, Re-setting Expectations  
Testing – Quality Assurance, Test Strategy  
Security  
Technical Proficiencies – such as, but not limited to:

- Accessibility
- Efficiency/Performance
- Interoperability/Compatibility
- Privacy
- Reliability/Dependability
- Scalability
- Telemetry
- Testability
- Usability

Handoff/Transition  
Project Specific Best Practices

### Policies:

You **will never** be downgraded or negatively impacted for asking for help in Design Studio. Late work will receive an automatic 50% deduction and will not be accepted more than one week past the due date. Grades will be assigned based on the following scale:

|    |            |   |            |    |            |
|----|------------|---|------------|----|------------|
| A+ | *          | A | >= 93.0000 | A- | >= 90.0000 |
| B+ | >= 87.0000 | B | >= 83.0000 | B- | >= 80.0000 |
| C+ | >= 77.0000 | C | >= 73.0000 | C- | >= 70.0000 |
| D+ | >= 67.0000 | D | >= 63.0000 | D- | >= 60.0000 |
| F  | < 60.0000  |   |            |    |            |

\* Grades of A+, at the discretion of the faculty and staff, will be reserved for students who demonstrate an exemplary performance on all practice and academic tasks.

### Student Expectations

Students are expected to follow all sponsor, coach, faculty, and staff instructions during the completion of their assigned projects. When expectations are unclear or unknown, it is the responsibility of the student to seek clarification by consulting the appropriate parties as students will be collaborating closely with industry professionals. All students are expected to be respectful and interact with the highest levels of professionalism in all aspects of this experience.

**First-year students** are generally expected to be team members, contributing fully to the team while gaining experience in the Design Studio expectations and process. First-year students have the opportunity to provide leadership in a specific subject area or skill within a team once those areas are identified. In some years, first-year students might be contacted to volunteer for a leadership position. This is something that happens on occasion and is not available every year.

**Second-year students** are generally expected to be team leaders, fulfilling one of the two manager roles on the team and using their experience to lead and direct the team through Design Studio.

**Team Expectations** Projects are completed over the course of the academic year. Projects will be completed using an iterative development methodology based on Scrum as outlined in course materials. Each project team, in conjunction with the sponsor/startup stakeholders, coach, Academic Lead, and Program Lead, is expected to operate using the processes prescribed by Design Studio. Deviation from the processes should be discussed with the Program Lead and Academic Lead and agreed to by all parties; deviations from the Design Studio process rarely will be approved. Startup teams should discuss concerns early if concerned with meeting Design Studio processes due to the stage of the startup. Teams also are responsible for reporting their status to all stakeholders on at least a weekly basis. Expectations of the team will come primarily from the sponsor or startup founders and be supported by class content.

### Attendance

Students must attend (either virtually or in-person) all scheduled class events and participate in activities. Attendance that is required will be noted on the Course Schedule and NCard scanners will be used to track in-person participation and Zoom participation or viewing records will be used and tracked in Canvas. Up to three unexcused absences are allowed per semester. Team time or sponsor meetings are not an excused absence. Design Studio follows the University Registrar's Class Attendance Policy (<https://registrar.unl.edu/academic-standards/policies/class-attendance>).

### Conflicts

Design Studio includes a significant amount of software development work to complete the product development. The primary purpose of the course is to provide an educational opportunity for the students and an opportunity to recruit interns and new post-graduate hires. At the same time, teams are developing intellectual property that will be owned by the sponsor or start-up at the end of the Design Studio year. As a result, Design Studio requires some conflict management policies like those that you would find in an internship or after you accept a job.

### Your Time

When in team time you should be working on tasks that are related to your Design Studio project. There is always plenty to do and team time is not homework time. If you have your own business (outside of those selected to participate in Design Studio), you should **never under any circumstances use team time or Design Studio equipment or resources for any work related to your business.**

### Design Studio Resources

We will provide you with the tools and resources necessary to successfully complete your project. This includes a space to work, a machine to develop on, and devices needed to adequately test your product. You should not use any of these resources for tasks that are not related to your Design Studio project. While team rooms are primarily for

Design Studio work, other quiet uses of the space that don't impact the other Design Studio teams are acceptable (such as using it as a quiet place to do homework outside of team time). Team rooms are only to be used by authorized Design Studio students, faculty, and staff. Guests (including students on other Design Studio teams not located in the same team room) are only allowed with the permission of a Program Lead. You should not use personal computers for Design Studio development and vice versa. If you choose to do Design Studio work on a personally owned computer, be aware that your computer and all its content may be subject to review by the sponsor. Also, be aware according to University policy, anything placed on a University-owned computer is not private and may be reviewed by UNL faculty and staff, or a member of the sponsor organization.

### Employment

To balance time spent on Design Studio with all other activities in which students are involved, and to prevent undue influence that may disrupt that balance, working for a Design Studio sponsor during the academic year is prohibited. Working for means being paid in any way for work that is being done during either the fall or spring semester. In a limited number of cases, exceptions to this policy can be made with the understanding that **no student may work for the sponsor of the project to which they are assigned under any circumstances**. This policy does not prevent you from seeking post-graduate employment or internships or accepting any offer of employment outside of the Design Studio year. You are encouraged to take advantage of the opportunities that are created by working with sponsors in Design Studio. Requests for an exemption to this policy should be provided in writing to the Director of Design Studio.

### Sponsor Meetings

Weekly team meetings with sponsors are required. They may occur during regularly scheduled team times but may not be scheduled during class time when a class session is scheduled to be held. All team members must be present either in-person or virtually. It is also recommended to schedule a site visit to sponsor offices early in the first semester, if applicable to your team.

### Release Meetings

Release meetings are milestone reviews that allow teams to hand off, demonstrate, and defend the current results while providing direction, setting expectations, and planning for project completion. The goal of each release meeting is to provide stakeholders with a releasable work product. Releasable work product is some iteration of the project that the stakeholders can interact with outside of the meeting, share with others, and use to provide feedback independent of interaction with the team. Teams are encouraged to plan features around making each release as functional as possible and push aggressively towards production-ready releases. All Design Studio teams will release work product in a coordinated effort across all teams. See the Canvas course calendar or Slack for release dates. Each release will involve the Design Studio project team, the stakeholder/sponsor team (including the product owner), and the assigned Design Studio Program Lead and Academic Lead working together to demonstrate and discuss their progress on the project to the project executive sponsors. Release meetings must be scheduled within one week (before or after) of the scheduled release date and must take place between the hours of 9 am and 5 pm; without permission from the Design Studio Director, a release meeting may not be scheduled to run later than 5 pm. If a sponsor requires a release meeting that will run late, it should be scheduled with your team's Program Lead and Academic Lead. Unless otherwise requested by and prearranged with the sponsor, in-person release meetings need to take place in Kauffman.

Teams are **strongly encouraged** to schedule release meetings by sending calendar invites as early as possible after the start of the semester. Program Leads and Academic Leads (as well as project sponsors) may have full daily schedules and it may be difficult to coordinate a meeting time with them. There are a limited number of conference rooms available for in-person meetings or video conference rooms for online meetings with the team members taking place in Kauffman. A calendar meeting invitation must be sent to all required meeting participants.

### Tools

Online management and collaboration tools will be detailed during the first several weeks of class. Teams are expected to utilize Design Studio-supplied project resources for collaboration, issue tracking, and source code management. Slack, Canvas, SharePoint, GitHub, and ZenHub are used for these purposes. Azure DevOps can fulfill

some of this functionality and Design Studio is continually experimenting with other tools. Consult with the Architecture and Engineering Lead with any tooling questions. In cases where sponsors wish to provide their own tools, teams are expected to use those and ensure that the Academic Lead and Program Lead have access during the project.

### **Meeting and Team Rooms**

Each team will be assigned a team room and will have access to space for the various meetings that take place in Design Studio. Please be sure to choose meeting spaces most appropriate for the size and technology needs of your planned meeting. See Canvas for instructions on booking Kauffman conference rooms.

The following conference room spaces are available to Design Studio teams for meetings in Kauffman:

- KAUF 127A – Small Video Conference Room
- KAUF 127B – Small Video Conference Room
- KAUF 127C – Small Video Conference Room
- KAUF 127D – Large Video Conference Room
- KAUF 127E – Large Video Conference Room
- KAUF 102 – Large Conference Room (limited equipment for remote participants, use only if no 127 rooms are available and all participants are in-person)

Design Studio team rooms are as follows:

- KAUF 102 – (Available from 2nd semester onwards, more details to follow.)
- KAUF 104 – 3 teams
- KAUF 114 – 3 teams
- KAUF 115 – 3 teams
- KAUF 116 – 2 teams
- KAUF 125 – 4 teams
- KAUF 137/A – 5 teams

### **Satisfying Thesis Requirements**

#### **UNL Honors Program Thesis**

Participation in Design Studio will satisfy the requirement for an undergraduate thesis in the UNL Honors program. The use of the Design Studio experience in satisfying these requirements is subject to all policies, deadlines, and requirements of the respective program. Teams will complete two documents in the spring (Project Retrospective and Executive Summary) that will be approved by Design Studio faculty and staff and can then be submitted to the Honors program to complete the thesis requirement. Additional instructions will be provided in the spring semester with the two documents on exactly how to submit your work for Honors thesis credit.

UNL Honors Thesis: [Honors Senior Project | Honors Program | Nebraska \(unl.edu\)](#)

#### **College of Arts & Sciences Undergraduate Thesis for Degrees with Distinction**

Participation in Design Studio may be used to partially satisfy requirements for an undergraduate thesis for graduation with some level of distinction in the College of Arts & Sciences. The use of the Design Studio experience in partially satisfying these requirements is subject to all policies, deadlines, and requirements of the college. Students intending to complete a thesis are advised to familiarize themselves with the program requirements.

UNL College of Arts and Sciences: <http://cas.unl.edu/degrees-distinction>

The work of writing a thesis must be supervised by a faculty member from the college (faculty advisor). If you do not have a preferred faculty advisor for your thesis, Dr. Steve Cooper, Executive Director of the Raikes School, will serve as your faculty advisor.

### **Requirements for an Undergraduate Thesis for Degrees with Distinction**

The thesis must be the result of independent, sustained thought and intellectual curiosity. A survey of the literature about a particular topic is not sufficient however novel it may be. Ideally, there should be a clear formulation of a problem or question, scholarly study which illuminates or addresses it supported by the work done in Design Studio, and a conclusion supported by evidence. A bibliography and reference to existing literature in the field should be included where appropriate. The thesis should be a minimum of 20 pages. Students, working closely with their two thesis advisors, may develop a project that takes a form other than a traditional thesis (e.g. they may develop video, audio, or a web-based project), but the research, knowledge, effort, and quality of work should be comparable to that of a thesis in the discipline.

Students should work closely with their faculty advisor as they complete their thesis. A final copy of the thesis must be submitted to their faculty advisor no later than **one month** prior to the program deadline for final thesis submission.

### **Writing Center**

The Writing Center can provide you with meaningful support as you write for this class as well as every course in which you enroll. Trained undergraduate and graduate peer consultants are available to talk with you about all forms of communication. You are welcome to bring in everything from lab reports, presentations, and research papers to cover letters, application essays, and graduate theses and dissertations. Writing Center Consultants can work with you at any stage of the writing process, from brainstorming and organizing your ideas through polishing a final draft.

There are three ways you can connect with a Consultant:

- Online (a real-time, video conversation)
- eTutoring (email feedback)
- In person

To learn more about online options and view video tutorials, visit <https://www.unl.edu/writing/online-writing-center-services>. For information about the Writing Center's COVID-19 policies, visit <https://www.unl.edu/writing/covid-19-policies>.

Sign up for an appointment any time by visiting [unl.mywconline.com](http://unl.mywconline.com). For other information about the Writing Center, please visit [unl.edu/writing](http://unl.edu/writing).

### **Course Policies**

#### **Huskers Email Required**

Your @huskers.unl.edu address will be the primary email for all Design Studio communications emailed to students.

#### **Recording of Class-Related Activity**

We invite all of you to join us in actively creating and contributing to a positive, productive, and respectful classroom culture. Each student contributes to an environment that shapes the learning process. Any work and/or communication that you are privy to as a member of this course should be treated as the intellectual property of the speaker/creator and is not to be shared outside the context of this course.

Students may not make or distribute screen captures, audio/video recordings of, or livestream, any class-related activity, including lectures and presentations, without express prior written consent from the Director of Design

Studio or an approved accommodation from Services for Students with Disabilities. If you have (or think you may have) a disability such that you need to record or tape class-related activities, you should contact Services for Students with Disabilities <https://www.unl.edu/ssd/>. If you have accommodation to record class-related activities, those recordings may not be shared with any other student, whether in this course or not, or with any other person or on any other platform. Failure to follow this policy on recording or distributing class-related activities may subject you to discipline under the Student Code of Conduct.

### ACE Requirements

The CSCE 401H course will satisfy ACE Learning Outcome #8: Explain ethical principles, civics, stewardship, and their importance in society. Learning opportunities for ACE8 will include:

- Reading, viewing, and discussing about the required materials
- An investigative case study
- Hands-on design of your capstone project

In this course, you will be given opportunities to learn, be assessed on what you have learned, and have specific critical skills reinforced. Specifically, through the required materials, you will learn about events due to poor ethics, lack of civic judgments, and inadequate stewardship exercised by the environment, and how these events impacted society. The readings and other materials have been specifically chosen for that purpose. After going through these materials, quizzes will be given. First, you will be required to learn about general ethical principles expanded into applying those principles via several real-world case studies. Second, you will be quizzed regarding the application of ethical principles. As part of the overall course grade, you will be assessed via the quizzes, your project reports, and how you practice ethical principles in the way you document your work and acknowledge others'.

The RAIK 402H and CSCE 402H courses will satisfy ACE Learning Outcome #10: Generate a creative or scholarly product that requires broad knowledge, appropriate technical proficiency, information collection, synthesis, interpretation, presentation, and reflection.

### School of Computing

Design Studio follows all School of Computing course policies:

- The CSE Department has an anonymous contact form (<https://computing.unl.edu/anonymous-department-feedback-form>) that you may use to voice your concerns about any problems in the course or department if you do not wish to be identified.
- All homework assignments, quizzes, exams, etc. must be your own work. No direct collaboration with fellow students, past or current, is allowed unless otherwise stated. The Computer Science & Engineering department has an Academic Integrity Policy (<https://computing.unl.edu/academic-integrity-policy>). All students enrolled in any computer science course are bound by this policy. You are expected to read, understand, and follow this policy. Violations will be dealt with on a case-by-case basis and may result in a failing assignment or a failing grade for the course itself.

### UNL Course Policies and Resources

Students are responsible for knowing the university policies and resources found on this page (<https://go.unl.edu/coursepolicies>):

- University-wide Attendance Policy
- Academic Honesty Policy
- Services for Students with Disabilities
- Mental Health and Well-Being Resources

- Final Exam Schedule
- Fifteenth Week Policy
- Emergency Procedures
- Diversity & Inclusiveness
- Title IX Policy
- Other Relevant University-Wide Policies
